

SAMARTH JAIN

Jaipur, India | +91 7878908050 | samarthjain.cse@gmail.com | github.com/Samarth-27 | linkedin.com/in/samarth-jain-a8643928a

PROFILE

Computer Science undergraduate (Batch 2027) at JECRC University with strong foundations in data structures, algorithms, and object-oriented design, combined with hands-on experience across full-stack development and applied AI/ML. Proficient in Python, C++, and JavaScript, with proven ability to design and build scalable systems — from role-based full-stack platforms to AI-driven allocation engines using NLP and optimization algorithms. Completed a Generative AI internship at Celebal Technologies, and passionate about solving complex, ambiguous problems in distributed and large-scale environments.

INTERNSHIP

Celebal Technologies — CEI (Celebal Excellence Intern), Data Science / GenAI

May 2026 – July 2026

- Built AI-driven applications using Python, Machine Learning, and Large Language Models (LLMs) as part of structured industry training and hands-on projects.
- Developed Retrieval-Augmented Generation (RAG) workflows, applied prompt engineering techniques, and explored agentic AI architectures for intelligent automation.
- Performed data preprocessing, feature engineering, and model experimentation using Python-based data science libraries.
- Strengthened software engineering practices by building modular, maintainable solutions and collaborating through Git and GitHub.

PROJECTS

StayTrack — AI-Powered Hostel Operating System | [view project](#)

Tech Stack: React, Node.js, Express.js, MongoDB, TypeScript, JWT, Gemini API, Nodemailer

- Designed an agentic AI router that dynamically chooses between RAG-based knowledge retrieval and tool-calling against internal backend APIs based on user intent, with strict RBAC enforcing role-specific tool access (Warden vs Owner).
- Built a tool-calling layer exposing live MongoDB operations (occupancy, revenue, pending payments) to the LLM, enabling natural-language queries answered with real-time data instead of static responses.
- Implemented an async AI complaint-analyzer pipeline that parses free-text complaints into structured JSON (severity, suggested staff, estimated resolution time) to auto-triage support tickets.
- Automated payment reconciliation using Gemini Vision OCR to extract UTR, bank, and amount from payment screenshots, plus an AI-driven reporting layer that synthesizes raw data into executive summaries and downloadable PDF insights.

AI-Powered Intelligent Hiring Assistant | [view project](#)

Tech Stack: Python, XGBoost, spaCy, PyMuPDF, FAISS, Groq API (LLaMA 3.3 70B), Streamlit

- Built an end-to-end resume-evaluation pipeline spanning data engineering, ML classification, semantic ranking, and generative feedback across 5 modular components serving 40+ job categories.
- Trained and evaluated multiple discriminative models (XGBoost, Random Forest) on TF-IDF features, achieving 92% accuracy and 95% macro F1-score across 41 job categories.
- Designed a real-time resume-ranking engine combining weighted Skill Matching (50%), Semantic Similarity (30%), and contextual signals, with PDF/DOCX parsing via PyMuPDF and spaCy.
- Implemented a FAISS-backed RAG pipeline powering an Explainable AI feedback system and conversational career-mentor chatbot, deployed as a full-stack Streamlit application.

SKILLS

Languages: Python, JavaScript, C++

Core CS: Data Structures & Algorithms, Object-Oriented Design, Operating Systems, DBMS, Complexity Analysis

Front-End: React.js, HTML5, CSS3, Tailwind CSS, Responsive Web Design

Back-End & Databases: Node.js, Express.js, MongoDB, REST APIs, JWT Auth

AI & ML: Prompt Engineering, LLM Applications, Retrieval-Augmented Generation (RAG), FAISS

Tools & Practices: Git/GitHub, Chart.js, colab, kaggle

EDUCATION

JECRC University, Jaipur — B.Tech, Computer Science and Engineering

2023 – 2027

CGPA: 8.16

CERTIFICATIONS

- Google Cloud Engineering Certificate — Google Cloud, Oct 2025 (ACE-endorsed): Compute Engine, GKE, VPC, DevOps, Vertex AI
- Prompt Engineering & Programming with OpenAI — Columbia University, Aug 2025: OpenAI API, LangChain, LlamaIndex
- JECRC HackQuest 8.0 — Prize Winner, Sept 2025 (36-hour hackathon)

ACHIEVEMENTS

- Global Rank 14,311 on Unstop Leaderboard — 82,296 points and 40 certificates across competitions.
- Smart India Hackathon 2025 Prelims — Runner-Up; built and presented a problem-solving project as part of a team.
